Durham University Business School (Bar/Lounge Room MHL418)

Durham University Business School (Room MHL403)

The 5 year N8Agrifood Resilience Programme funded partly by HEFC and the N8 Universities will tackle the challenge of global food security through three interconnected multidisciplinary research themes:

1. **Sustainable Food Production**

Precision agriculture, soil regeneration, resilient and productive crops and livestock, novel diagnostics, predictive modelling, including environmental impact assessment, and ‘omics’ to promote resilient, sustainable food production.

2. **Resilient Food Supply Chains:**

Adapting food supply systems to deliver increased resilience and nutrition, while improving public health, reducing environmental impacts and enhancing sustainability.

3. **Improved Nutrition and Consumer Behaviours**

Lowering the burden of food production and distribution on the natural environment through changes in behaviour, diet and other socio-economic factors.

Guaranteeing sufficient, safe and nutritious food for a growing, increasingly affluent population is a significant long-term global challenge, beyond the capabilities of any single research group within Durham University. The breadth of the challenge requires an integrated, large-scale, multi-disciplinary research effort. This event will provide information on the delivery of the N8 Agrifood programme in Durham including details of seed corn funding opportunities to develop collaborations across the different faculties within the University as well as the N8 universities within the Agrifood resilience theme.

For further information or if you would like to attend this event please RSVP for catering purposes
